**CHILD'S STROLLER WITH FRAME WITH SLIDING ELEMENTS
WITH NO SPACE BETWEEN THEM, AND CORRESPONDING FRAME**

ABSTRACT OF THE DISCLOSURE

The invention relates to a child's vehicle with a folding frame, comprising at least one front shaft provided with at least one front wheel, a rear shaft provided with at least one rear wheel, and a pushing device cooperating with a guiding handle, wherein said frame includes at least one assembly of two pieces which can slide in relation to each other without a space therebetween. A first piece of said two pieces has at least one track and the second of said two pieces has at least one slider which slides in said track.
